

ITD Mining Saves Over 30% With THE CELL.

BOB POTCHEN AND SUTHON C. OF ITD-MINING

APRIL 30, 2010, Bob Potchen announced today that ITD-Mining has saved over 30% of their fuel on the Hitachi 1700, running one of the largest Cummins engines ever built. They have completed their evaluation and certification period and released the results to us. As the largest mining operation in SE Asia, ITD was extremely pleased with the results. “This is the best purchased we have made in the last 10 years”, states one of the senior members of the board.

They anticipate outfitting all of their vehicles over the next year with THE CELL. Their rigorous demands and rough environment posed some initial challenges for the team, but all were met and overcome with great success.

This is one of the first customers that has allowed us to publish their results, says Bob Potchen, President of The Cell, Inc. Most customers are gun shy about letting the competition know just how they have the distinct advantage by using THE CELL.

ITD had tried several other HHO systems prior to THE CELL, INC without success. So when it came to The Cell Inc, they researched them extensively before deciding to go ahead one more time.
